Cocaine is a powerfully addictive drug of abuse. Once having tried cocaine, users cannot predict or control the extent to which they will continue to use the drug. Though cocaine abuse is down, it remains the second most used illicit drug in America. Cocaine is a drug created from a paste extracted from the leaves of the South American coca plant. It is a strong stimulant that affects the body's central nervous system. Cocaine can be injected, smoked, sniffed, or snorted. Cocaine can be mixed with other drugs including the anesthetic procaine and amphetamine. When cocaine and heroin are combined, it produces what is called a "speedball." Cocaine is the second most commonly used illicit drug in the U.S. Nearly 1.5 million Americans (0.6% of the population) reported using cocaine according to a 2014 study. The rate of use has remained relatively steady since 2009 after a sharp decline from the 1990s and early 2000s. Users can be from all economic status, all ages, and all genders. A higher rate is reported among young adults between 18 and 25 years old. Cocaine is a white crystalline powder. Crack cocaine looks like a small rock, chunk or chip and it is sometimes off-white or pink in color. It's common for street dealers to "cut," or dilute, cocaine with a variety of substances. This is used to make more money since it's sold by the weight. The additives can include anything that's white and powdery including cornstarch, talcum powder, flour, and baking soda. The drug creates a strong sense of exhilaration. Users generally feel invincible, carefree, alert, euphoric, and have a lot of energy. This is usually followed by agitation, depression, anxiety, paranoia, and decreased appetite. The effects of cocaine generally last up to one hour. Cocaine is a potent and dangerous drug. The short-term and long-term effects of cocaine are equally serious. The most serious danger is death, resulting in cardiac arrest of seizures followed by respiratory failure. This can occur at anytime during short or long-term use. Other effects of the drug include: Insomnia Loss of appetite Blurred vision Vomiting High anxiety Irritability Constricted blood vessels Dilated pupils Nasal infections Nosebleeds Rapid breathing Sweating Violent behavior Twitching Hallucinations Chest pain The long-term effects of using cocaine can include extreme agitation, violent mood swings, and depression. Prolonged use of snorting cocaine cause ulcerations in the mucous membrane of the nose and holes in the barrier separating the nostrils. It can also result in a loss of appetite, extreme insomnia, and sexual problems. Heart disease, heart attacks, respiratory failure, strokes, seizures, and gastrointestinal problems are not uncommon among long-term users of cocaine and crack. Cocaine has a wide variety of street names. Among those are Coke, Dust, Toot, Line, Nose Candy, Snow, Sneeze, Powder, Girl, White Pony, Flake, C, The Lady, Cain, Neurocain, and Rock. "Crack" cocaine is also called "freebase." Crack cocaine is a highly addictive and powerful stimulant that is derived from powdered cocaine. Crack is made by dissolving powdered cocaine in a mixture of water and ammonia or sodium bicarbonate (baking soda). The mixture is boiled until a solid substance forms. It is removed from the liquid, dried, and then broken into the chunks (rocks) that are sold as crack cocaine. Due to its availability and intense effects, crack is also popular. Health risks and problems resulting from crack use are the same as those listed for cocaine. However, because of the intensity of the drug, it is a higher risk. Crack is almost always smoked, delivering a large quantity of the drug to the lungs. This produces an immediate and intense euphoric effect. Cocaine is highly addictive, leaving users with an overwhelming craving for the drug. The addiction to crack develops quickly, sometimes after just a few times of smoking it. Those addicted to cocaine or crack can find help with behavioral treatments including both residential and outpatient approaches. Asphalt is by far the most common material used for paving driveways. And just like the asphalt we see lining our streets and highways, asphalt driveways can develop cracks and dips over time. It's important to fix these cracks in a timely manner to protect the durability and appearance of your driveway. Fortunately, fixing cracks in an asphalt driveway is a simple process that only requires a do-it-yourself spirit and a few tools and materials that are readily available at most hardware stores. The most frequent cause of cracks in your asphalt driveway is water that has seeped below the surface and expanded or contracted with freezing and thawing temperatures. After patching and filling any cracks or dips in your asphalt driveway, you may also wish to seal your driveway to prevent any further water seepage. Preparation Before patching the crack, it is very important for the affected area to be as clean and smooth as possible so that the patching material can adhere easily. You should start by using a hammer and chisel to remove any broken pieces of asphalt obstructing the crack. Next, use a wire brush or a wire wheel on a drill to remove dirt and debris from the crack. Finally use a compressed air gun or a shop vac to ensure that all of the loose debris and smaller particles have been removed. If neither an air gun, nor shop vac is available to you, you can use a garden hose to flush out the crack. However, if you use a garden hose, you must let the crack dry completely before continuing. Regardless of what you use to clean the crack, it's recommended that you wear safety goggles to prevent and debris from harming your eyes. Once you have cleaned the crack in the asphalt thoroughly, you are ready to begin filling the crack. Be aware that smaller and larger cracks require different patching materials. The following steps will instruct you on how to fix both smaller and larger cracks. Fixing Smaller Cracks in Asphalt (1/8 in - 1/2 in) To fill smaller cracks you should use rubberized asphalt-emulsion crack filler. Try to avoid getting any of the filler on unaffected areas as it can stain the driveway. Apply the filler using a caulking gun if available. If you don't have a caulking gun, the filler can be poured carefully into the crack. Use a putty knife or trowel to smooth out the surface of the crack. If a putty knife or trowel is not available, you can use rubber gloves and smooth the crack out with your thumb. Let the filler dry according to the instructions on the packaging before driving over the affected area. If the crack you are trying to patch is deeper than two inches, you may wish to first fill the crack up to the two inch mark with small, crushed, angular gravel. Don't use pea gravel or other larger gravel as it can shift frequently and does not provide an adequate base. Next, you should compact the gravel using a steel tamper or a 4x4 wooden post. Now fill the crack with a cold process asphalt repair compound, such as blacktop. Compact the compound with a tamper or a 4x4 wooden post. After compacting, you may need to add more blacktop or compound material and repeat the tamping process to ensure a consistent, level driveway. While the surface blacktop will dry in a day or so, the blacktop beneath may take a few weeks to completely harden. Don't seal your driveway during this period as it will prevent air from getting to the patch and it will not harden properly. Deck boards littered with debris can be cleaned out with an "L" hook debris from in between deck boards or from expansion joints in sidewalks doesn't have to be time-consuming and tedious. Take a 2-inch-long metal L-hook and screw it into the end of a push-broom handle. Next, use the broom to brush the surface clean, then turn the broom around and use the L-hook to reach down into the cracks and crevices to rake out any remaining debris. You can make jewelry and necklaces with these First thing you need are some marbles and a glass pan Set the time to 20 minutes Now take the pan out of the oven and scoop up the marbles and put them in ice water Take the marbles out and they should be cracked Participated in the Epilog Challenge VI
